

# BI-RADS Score for Ultrasound - Final Report

## Patient Information

### Identification Data

HRN: BIR00000023  
ID Card: Unknown

### Microcalcifications

Findings: Yes  
Morphology: In a Mass

### Associated Features

Architectural Distortion: No  
Duct Changes: No  
Skin Changes: Skin Thickening  
Edema: No  
Vascularity: Internal  
Elasticity Assess.: Soft

### Glandular Composition

Type: Mainly Fat

### Special Cases

Simple Cyst: Yes  
Clustered Microcysts: Yes  
Complicated Cyst: No  
Mass in or on Skin: No  
Foreign Body: Yes  
Lymph Nodes: No  
Vascular Ab.: No  
Postsurgical Fluid: No  
Fat Necrosis: No

### Previous Studies

Prev. Mammography: No  
Prev. BI-RADS Score: Unknown

### Nodules/Masses

Findings: Yes  
Shape: Irregular  
Orientation: Not Parallel  
Margins: Microlobulated  
Echo: Hyperechoic  
Post. Feat.: Shadowing

### Mammography Realization

Date: 02-03-2018

## Outcome

### Results

According to Ultrasound Information, there is a HIGH RISK (BI-RADS Score = 5 of having BREAST CANCER).

### Conclusions

WE SUGGEST HIGHLY SUGGESTIVE FOR MALIGNANCY (> 95% MALIGNANCY RISK) AND PERFORM BREAST NODULE BIOPSY, PURSUANT TO THE BREAST IMAGING REPORT AND DATABASE SYSTEM (BI-RADS).

This report has been generated from the data entered on 03-03-2018 15:02:47 UTC/GMT.

### Disclaimer

Bioprognos has not developed the Breast Imaging Report and Database System (BI-RADS). BI-RADS was developed in 1993 by the American College of Radiology (ACR) as a method to help in radiology findings classification. Its mission is to standardize the terminology and the systematic for the radiological report, categorize injury by establishing a degree of suspicion, as well as assign the attitude that should be taken in each case. Bioprognos has implemented it for training or educational purposes only. You assume total responsibility for your use.
